## Population and Employment Trends: Changing the Conversation about Intensification

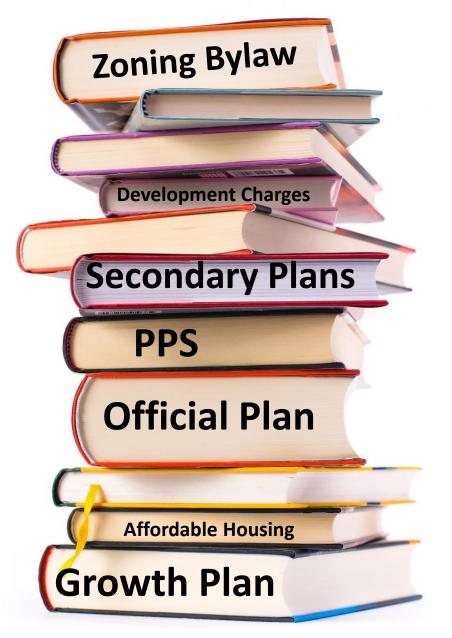

- The City Context
- The Policy Context
- Population and Employment Trends
- Challenges
- Solution Examples
- Questions

2017 147,000 people and 73,000 jobs By 2031 210,000 people and 101,000 jobs By 2041 253,000 people and 129,000 jobs

## **The Policy Context**

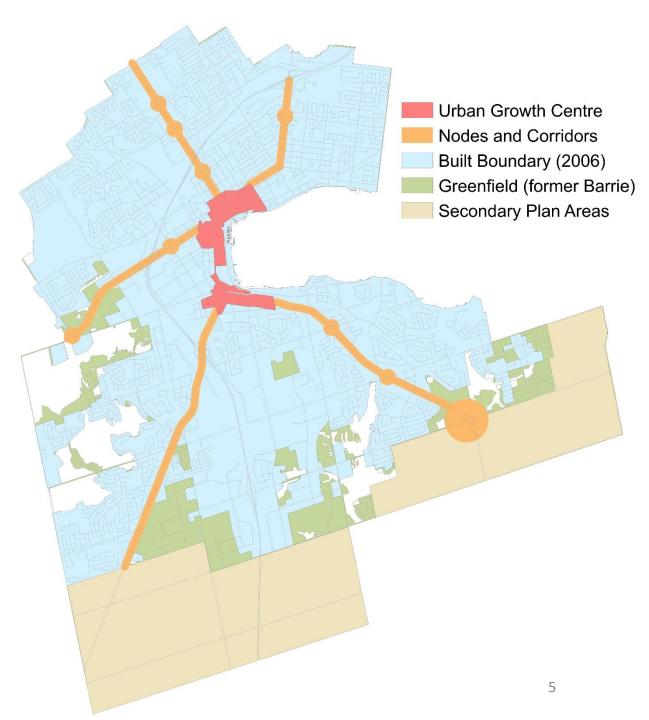

- A complex policy regime is in place that City must understand and conform to
- Recent changes to the Growth Plan affect the City's approach to growth and development
- While we have local policies in place, some are outdated and/or inconsistent
- In order to best position Barrie, we need to delve into the full spectrum of policies available to the City

## Designated Growth Areas

- Built boundary set by the Province in 2006
- Urban Growth Centre set by the Province in 2008
- Intensification Nodes and Corridors defined by the City in 2009

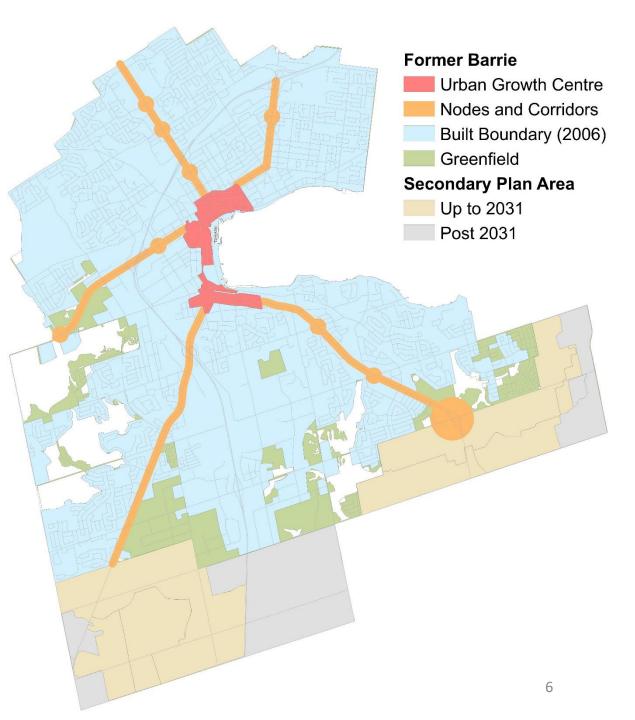

## **Phasing of Growth**

#### 2017 Growth Plan Targets

	Residential Intensification	Greenfield Density (people + jobs / hectare)		
2022-2031	50%	60		
2031-2041	60%	80		

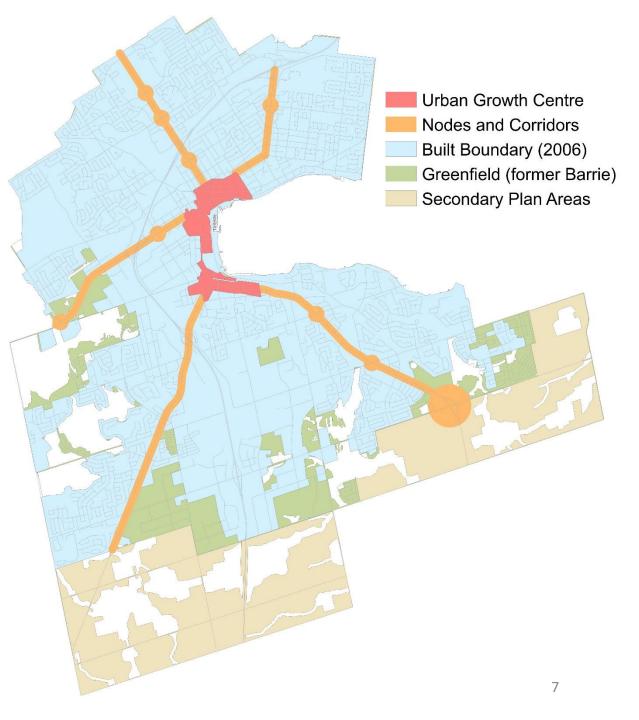

- Density requirements increased
- Intensification requirements increased

#### 2016 Population (census)

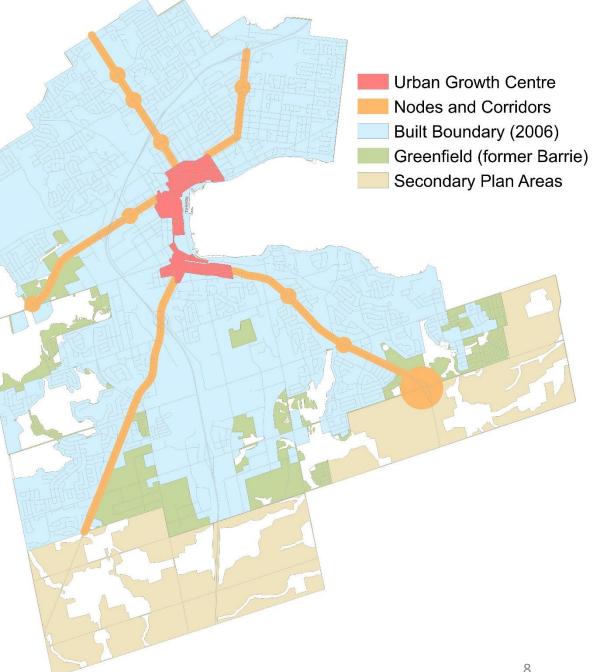

Area	Population	%
Urban Growth Centre	4,500	3%
Nodes and Corridors	6,500	4%
Other Built Boundary	125,200	86%
Greenfield (former Barrie)	9,300	6%
Secondary Plan Areas	300	0%
TOTAL	145,800	

#### 2031 Population Projection

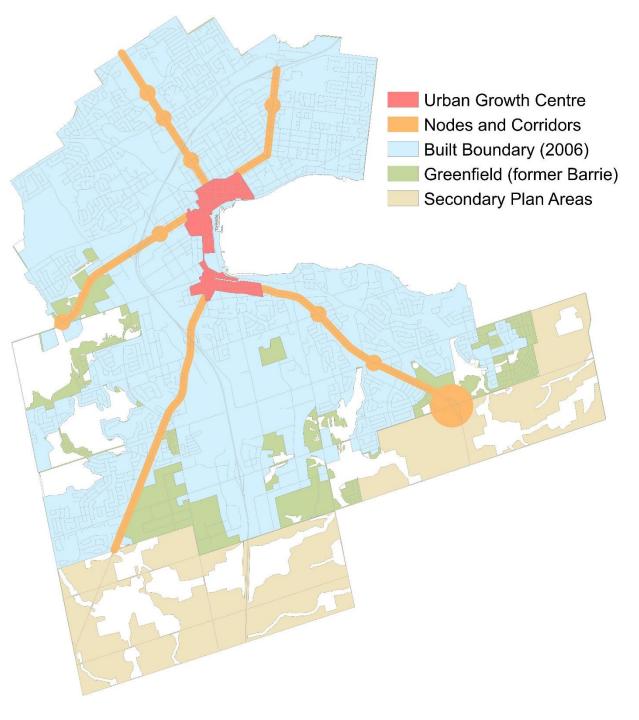

Area	Population	%
Urban Growth Centre	13,400	6%
Nodes and Corridors	12,000	6%
Other Built Boundary	129,000	61%
Greenfield (former Barrie)	15,000	7%
Secondary Plan Areas	40,600	19%
TOTAL	210,000	

#### 2041 Population Projection

Area	Population	%
Urban Growth Centre	17,600	7%
Nodes and Corridors	24,500	10%
Other Built Boundary	133,300	53%
Greenfield (former Barrie)	26,600	11%
Secondary Plan Areas	51,000	20%
TOTAL	253,000	

## **Growth Plan Conformity**

• While intensification assumptions are aggressive, we <u>do not meet</u> the 2017 Growth Plan targets

2017 GP Requirement	Barrie Growth Scenario	Issue/Challenge
Percentage Housing Intensification		
2022-2031 – 50%	45 %	High volume of greenfield development in Annexed Area – 2022-2031
2031-2041 - 60%	47 %	Housing allocation to the south Barrie GO station (DGA lands) poses challenges to the City regarding intensification targets
Greenfield Density (People and Jobs/ha)		
2006-2041 (DGA) - 60	65	City of Barrie aiming to exceed the 2006-2041 density requirement by allocating high-density growth around south Barrie GO Station
2031-2041 (FDGA) - 80	61	Difficult to achieve this level of density given location/attributes of FDGA lands in Annexed Area

## Challenges

- Only hitting the low end of density ranges
- Underutilization of UGC and Nodes and Corridors puts pressure on other areas
- Policy allows for intensification outside of Nodes and Corridors subject to criteria. This may not have been Council's intent.
- Negative perception of medium and high density development means it is tough to obtain approval for full development potential
- Without a significant change to density, in all areas, the City will not meet Growth Plan Density Targets

Focus on UGC and Nodes/Corridors

 To meet both 2031 and 2041 Growth Plan density target a significant amount of additional high-density growth needs to occur in the UGC and Nodes and Corridors How?

- Reduce the density range provided in the OP
  - <u>85</u>-120 upha
- Education and awareness about what medium and high density can look like and how it can function effectively

#### **Change the Conversation**

- Bring stakeholders together to:
  - Increase awareness
  - Explore myths and realities
  - Identify barriers
  - Define options/solutions
- Informed decision making and conscious choices for Council

#### How?

 Additional 18 high rises (12 storey) in the UGC <u>OR</u> 6 buildings at 24 storey

 Ground related townhouses in Nodes and Corridors <u>OR</u> mid-rise buildings offering vibrant focal point?

OR

**New Official Plan** 

- Municipal Comprehensive Review
  - Defend a *Made in Barrie* population and employment target
- Strengthened policies
- Clear criteria and expectations on built form and urban design

#### Short-term policy changes

- Density range
- Intensification outside of Nodes and Corridors

#### **Be Proactive**

- Define City's vision for key corridors and strategic UGC properties
- Prezone areas for mixed use and/or density that aligns to our vision

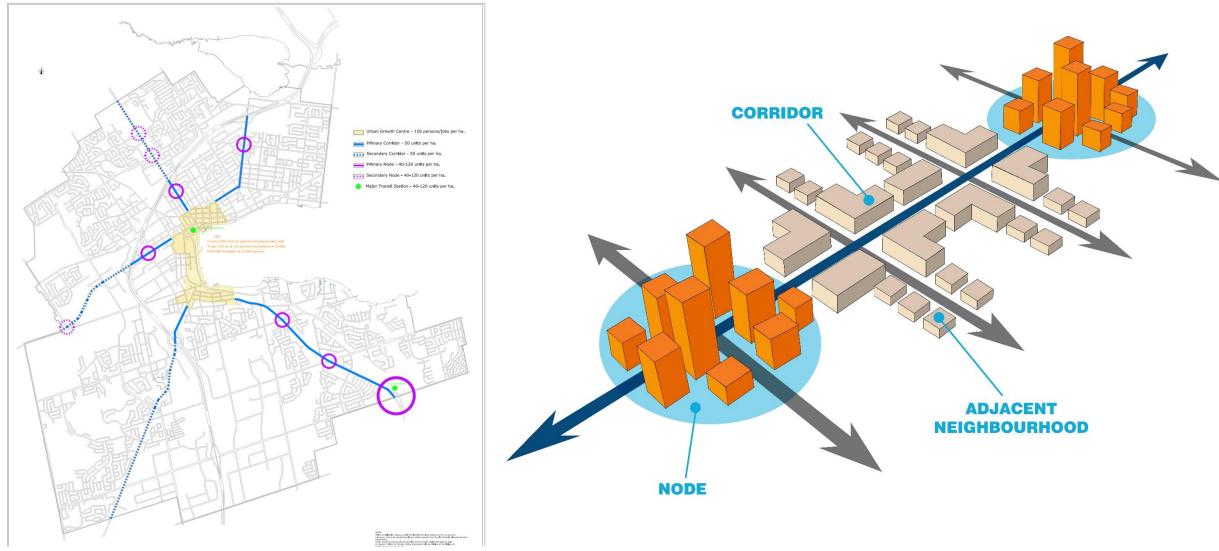

#### How?

- Essa Road Corridor Study
- Engage with landowners and the public in Q1 2018
- Share renderings of City Vision
- Implementing ZBLA in Q2 2018
- 1-15 Bayfield Street Redevelopment
- Define the City's vision
- Proceed with re-zoning

#### **INTENSIFICATION AREAS**

#### **ESSA ROAD CORRIDOR STUDY AREA**

#### EXISTING

## ENVISIONED

# Barrie

aroma

#### EXISTING

#### Summary

- The City has made progress with intensification but key areas are not reaching their full development potential; this puts pressure on other areas
- The 2017 Growth Plan targets further exacerbate the City's challenge in achieving projected growth levels in the UGC and Nodes and Corridors
  - Need 10x historic development in UGC and 4x historic development in Nodes and Corridors by 2031
  - Need to provide solid rationale for *Made in Barrie* scenario

#### **Summary**

- Changing the Conversation about intensification should occur now
  - Internally with key departments
  - Landowners and the public
  - Council
- The new Official Plan offers an opportunity to pursue a *Made in Barrie* approach with the Province
  - Anticipate a document for Council consideration in Q4 2019
  - Might secure tweaks to density and timelines; unlikely to see significant policy change
- Immediate solutions are available and will help to bridge the gap
  - Density range revision
  - Consultation on the Essa Road pre-zoning project
  - Awareness building and exploring solutions

Area	2016		2031		2041	
Urban Growth Centre	4,500	3%	13,400	6%	17,600	7%
Nodes and Corridors	6,500	4%	12,000	6%	24,500	10%
Other Built Boundary	125,200	86%	129,000	61%	133,300	53%
